## **DETAILED ACTION**

## Allowable Subject Matter

Claims 1-5 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record does not disclose nor suggest a sound source device for converting the detected change in cerebral circulation blood flow to sound pulses and performing auscultation based on the sound pulses. While references Maki et al and Lewis et al (cited in Applicant's Information Disclosure Statement) each disclose a probe section for irradiating a diseased part with near-infrared light, the probe having radiation and light receiving fibers, a control device having a laser light source connected to the radiation fiber and an optical detector connected to the light-receiving fiber, and a detector for detecting the change in cerebral blood flow, the references do not disclose nor suggest detecting the change in cerebral blood flow and converting the change to sound pulses by a sound source device for auscultation. John et al disclose a brain stethoscope having an oxymeter 34 which is coupled to computer system 40. However, there is no teaching of converting changes in blood flood detected by the oxymeter 34 to sound pulses. In fact, the sound pulses generated by John et al originate from conversion of brain waves into audible sounds. As a result, the combination of Maki et al (or Lewis et al) and John et al do not meet the limitations of independent claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
